Berlin, [Date — e.g. 3 June 2026]

[Hiring Manager Name]

[Company Name]

[Company Address — optional]

Application for [Job Title]

Dear [Hiring Manager / Hiring Team],

I am writing to apply for the [Job Title] position at [Company Name]. I am a full-stack developer based in Berlin with more than three years of hands-on experience building web applications, REST APIs and mobile clients with React, TypeScript and Node.js. I am currently working as a paramedic while transitioning into a full-time software role, and I am looking for a junior–mid position where I can contribute production-quality code, learn from a strong team and grow with the product.

My most relevant work is **Ambulancias GoRuiz**, a production B2B platform for ambulance operations that I designed and built end to end as sole developer: an admin web app, a worker portal, and a React Native (Expo) app for field staff, all backed by a Node.js/Express API with JWT authentication, multi-tenant company scoping and MongoDB. The product is live, multilingual (ES/DE/EN), and maintained with the same engineering discipline I would bring to your team — version control, code review, GitHub Actions, Docker in CI and automated tests on critical paths. This project reflects both my technical range and my interest in healthtech and operations software, domains I understand from professional experience on the front line.

I work with a modern, AI-assisted development workflow — including Cursor, Claude, MCPs and structured agent skills — to move faster on exploration, boilerplate and documentation. I see this as standard professional practice in 2026, not a substitute for engineering judgment: I review every change, own architecture and business logic, and treat AI output like any other code that must pass review before merge. Combined with solid fundamentals in Git, API design and maintainable React/TypeScript, this allows me to deliver reliably while staying current with how high-performing teams actually ship software today.

[Optional — one sentence on why this company/role: e.g. "I am particularly interested in [Company Name] because of your work in [domain/product], which aligns with my background in healthcare operations and my experience shipping GoRuiz."]

Before and alongside software development, I worked for years in high-pressure, people-facing roles — as a paramedic, driving instructor and restaurant manager. That background shaped how I communicate with non-technical stakeholders, prioritize under time pressure and take responsibility for

outcomes. I bring that same mindset to engineering: clear ownership, calm problem-solving and respect for users who depend on the system every day.

I am fluent in English and Spanish (native), communicate in German at B1–B2 level, and am open to remote, hybrid or on-site work in the EU. I would welcome the opportunity to discuss how my experience building full-stack products — and my commitment to quality in an AI-assisted workflow — can support [Company Name]’s goals. Thank you for your time and consideration.

Sincerely,

Antonio Ruiz Brocal
